MFGx & FUUZ | PLATFORM TOOLS

FUUZ® FROM MFGX

# MES PLATFORM INTEGRATIONS

**Data integration in manufacturing is essential for streamlined operations and real-time decision-making. With the Fuuz MES Platform, it’s easy to bring data from your enterprise software, machines, processes, and people into a centralized, structured database.**

You can also use our platform tools to create different screens that allow everyone in your organization, from the office to the plant floor, to organize data inputs in a meaningful way.

## FUUZ INDUSTRIAL INTEGRATIONS

### INTEGRATION PLATFORM AS A SERVICE (IPaaS)

The Fuuz MES Platform has hundreds of pre-built connectors for the enterprise software, legacy solutions, and apps you use every day. Our software engineers can also build new and custom connectors fast, enabling one source of truth for your enterprise while eliminating expensive third-party bolt-ons and complex IT complexity.

### MACHINE INTEGRATION

Industrial Internet of Things (IIoT) bi-directional integration and the Fuuz Device Gateway provide a reliable and secure pathway between disparate systems, eliminating machine-related data gaps on your factory floor.

### ERP SOFTWARE

ERP integrations are a differentiator for Fuuz. Our solution is compatible with every type of ERP system, including NetSuite, Oracle ERP, Microsoft Dynamics, SAP, Plex, Sage, Infor, QAD, and IFS, as well as legacy and homegrown solutions.

### THIRD-PARTY APPS

Did you know the average manufacturer uses 10+ different point solutions to connect the dots between their factory floor and enterprise software? The trouble is that these disparate solutions don’t integrate well and complicate your tech stack. Fuuz eliminates the need for costly third-party vendors with a robust suite of pre-built connectors that integrate with anything and everything.

**FUUZ®**  
ignite innovation™

Fuuz® powered by MFGx is a next-generation Manufacturing Execution System (MES) platform with supportive processes that help companies of all sizes gain full visibility into their global operations, automate manual processes and accelerate their digital transformation – without the expense of new enterprise software.
